

An Experiment of Earthquake Generation Process Prepared by Nature

- A Study of Seismicity Associated with by
Volcanic Stress Changes in and around the
Izu-Oshima Island -

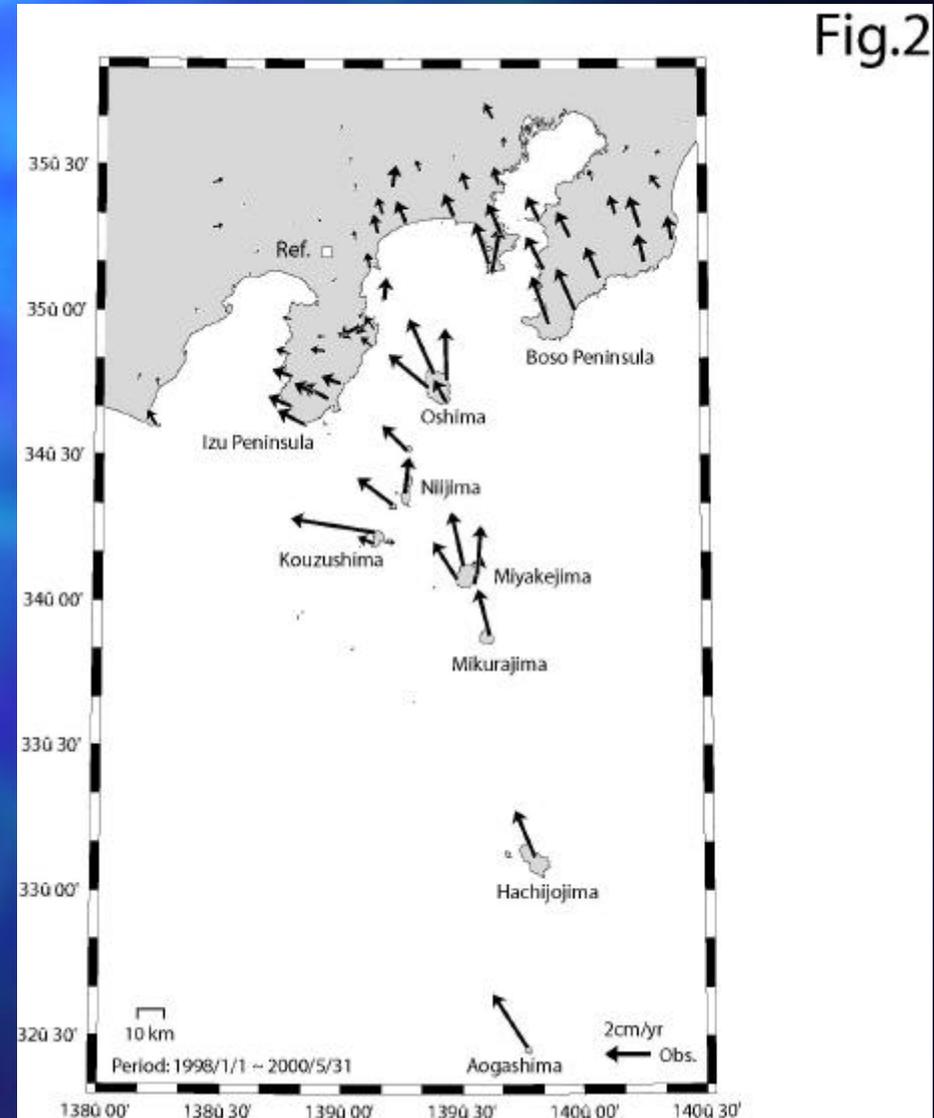

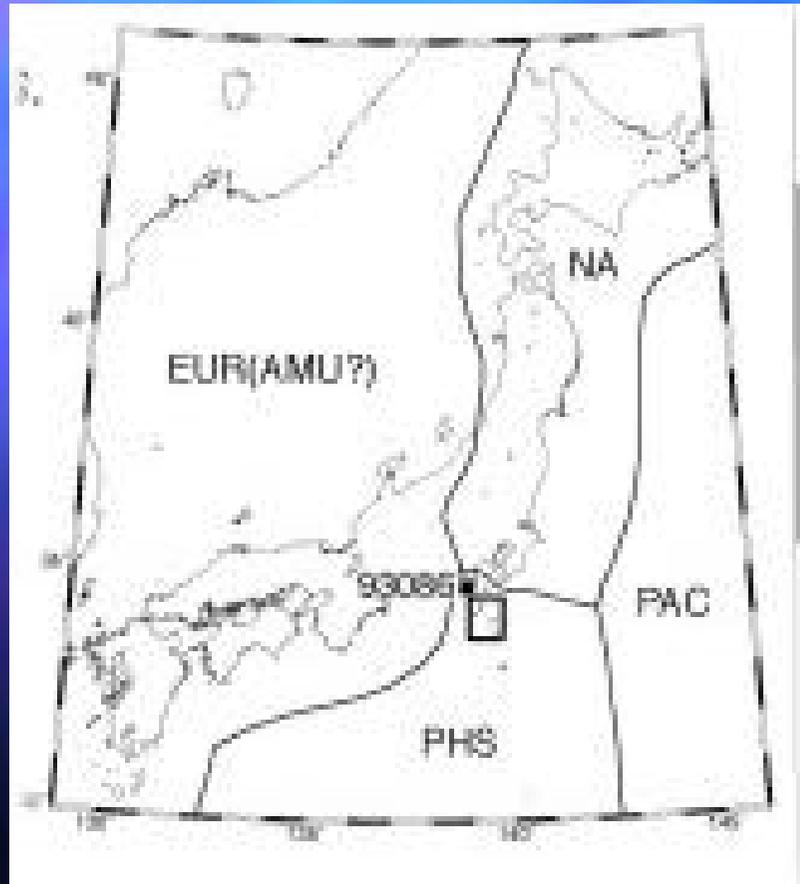

Makoto MURAKAMI
The Geographical Survey Institute

November, 2002
UJNR at Morioka Iwate, Japan

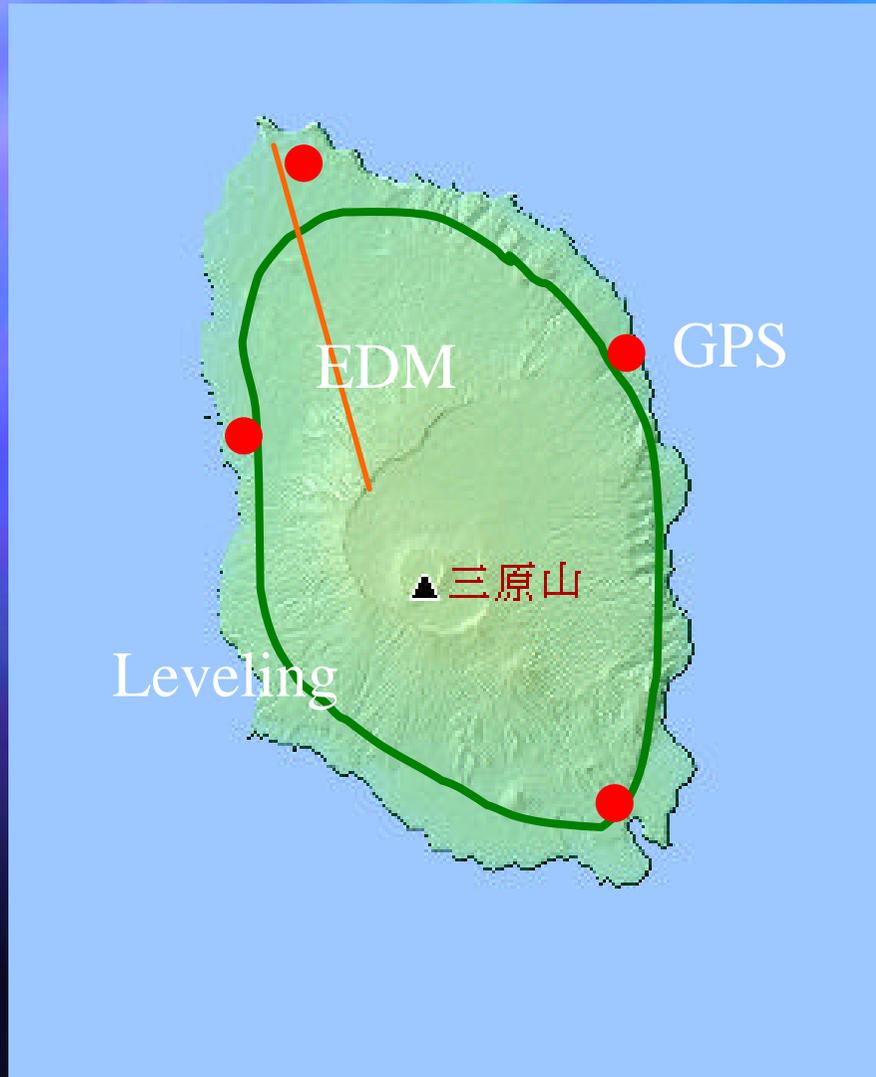

Outline

- A Natural Laboratory for Earthquake Production -- Izu-oshima
- Deformation, Seismicity
- Rich Data Set of Other Relevant Data: Geology, Structure, Geomagnetism, etc.

Tectonic Setting of Izu-Oshima

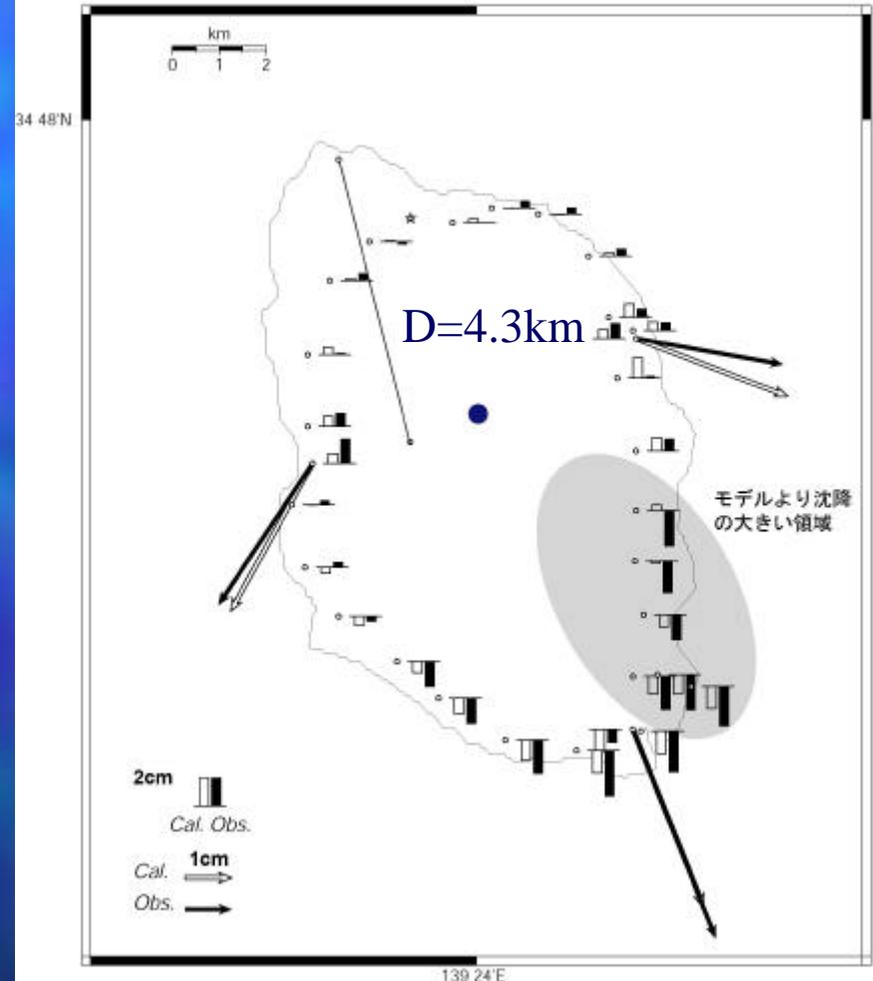

Crustal Deformation of Oshima

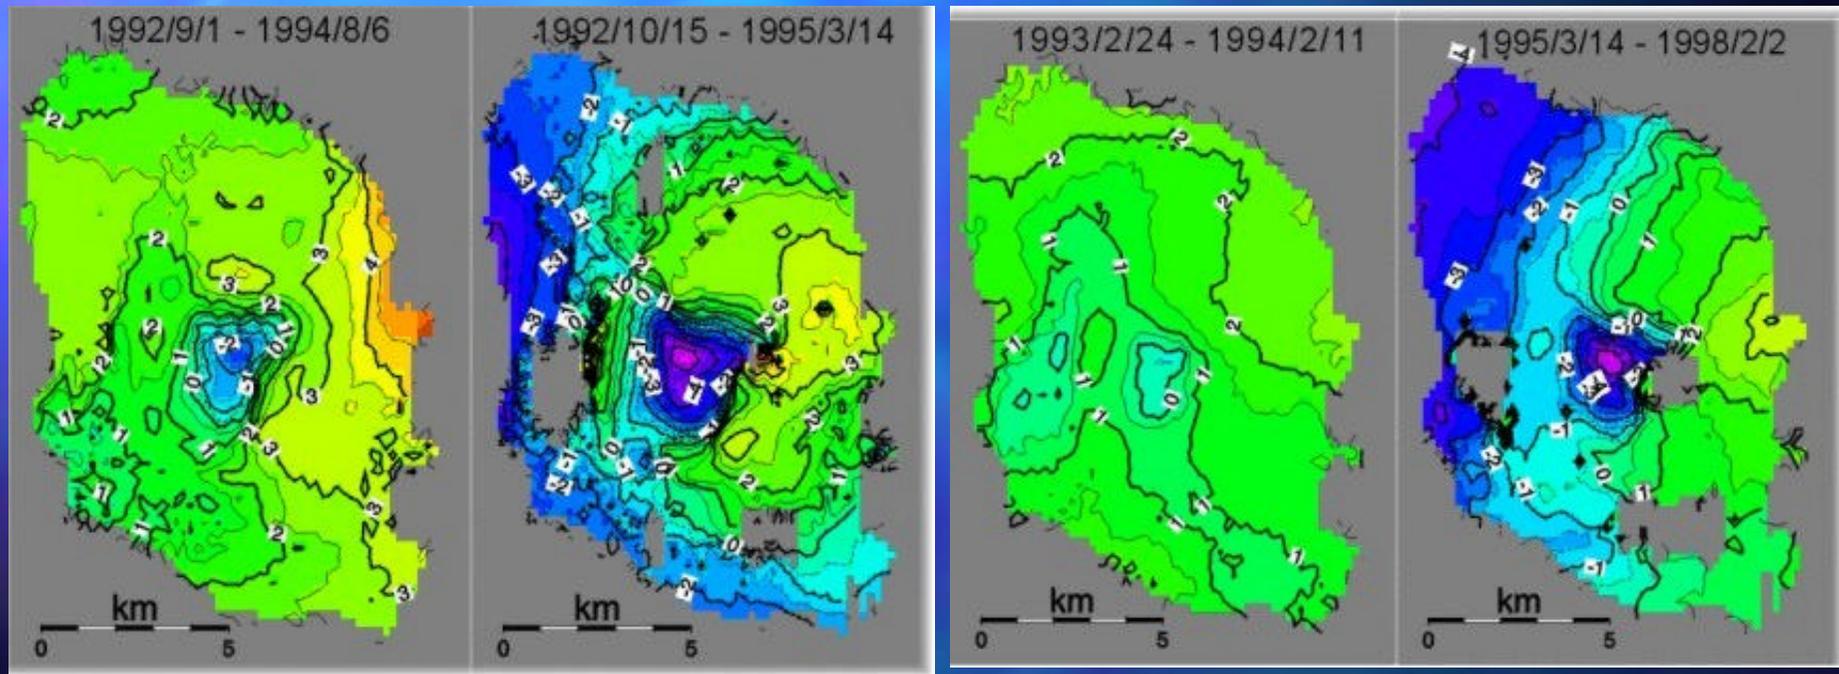

GPS、水準および辺長測量による伊豆大島の膨張モデル

Period1:1996/09/01 - 1996/09/15
Period2:2000/08/01 - 2000/08/15

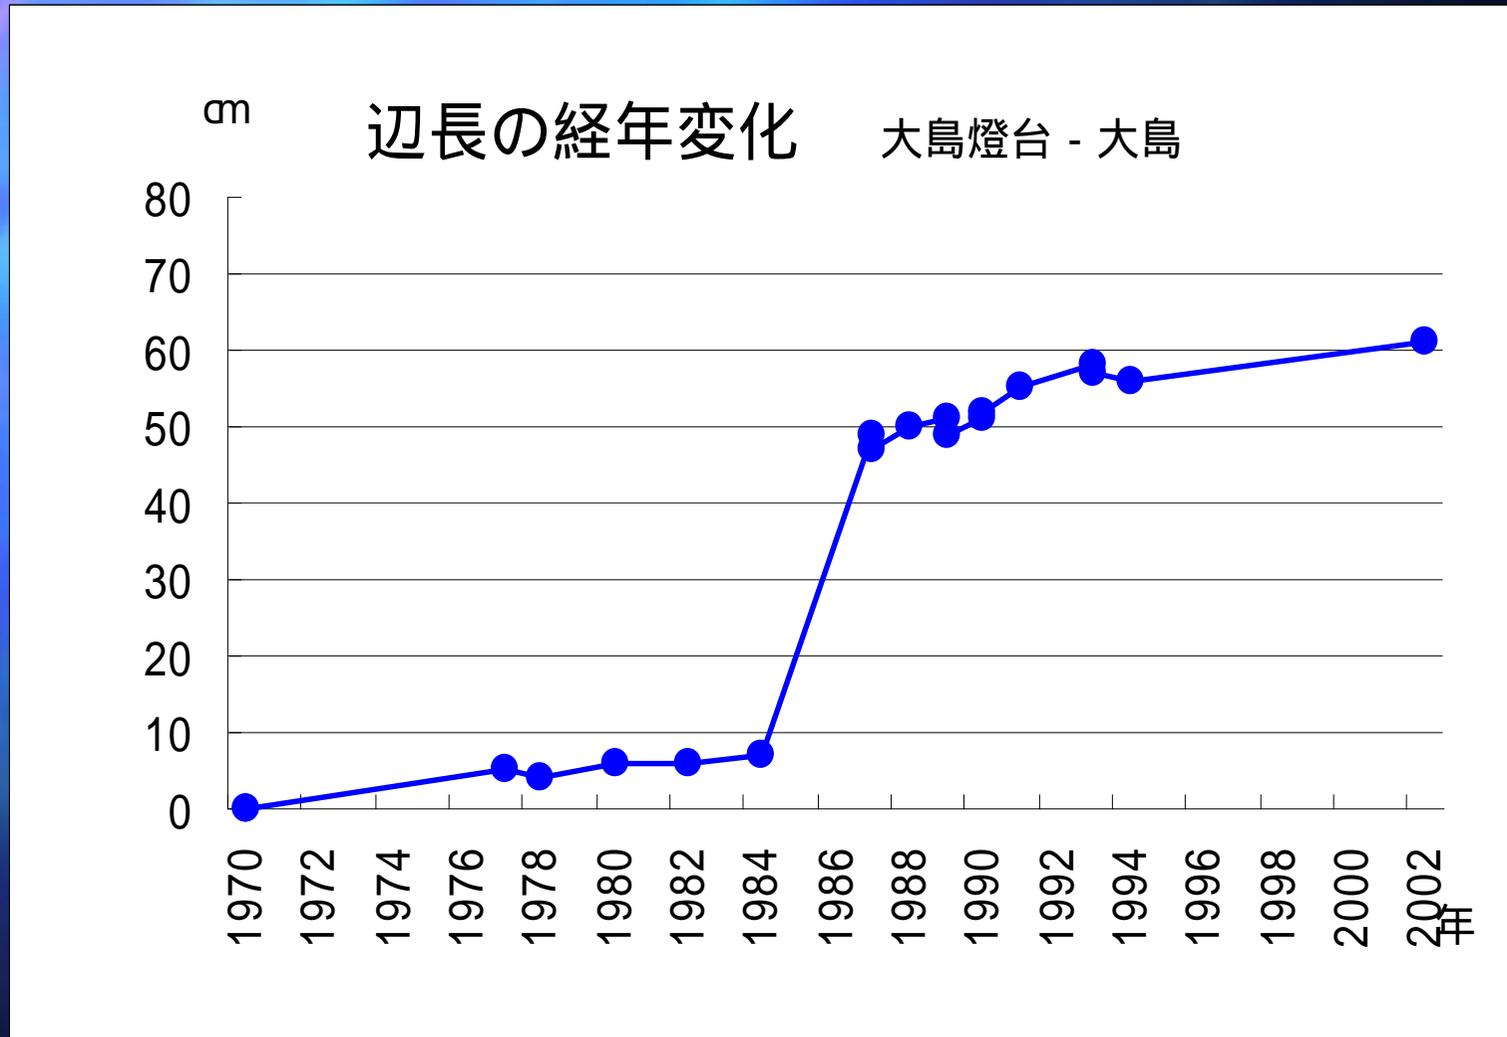

Lat=34.74 Lon=139.40 D=4.3km Inflation=5.6million cubic meter

JERS-1 InSAR

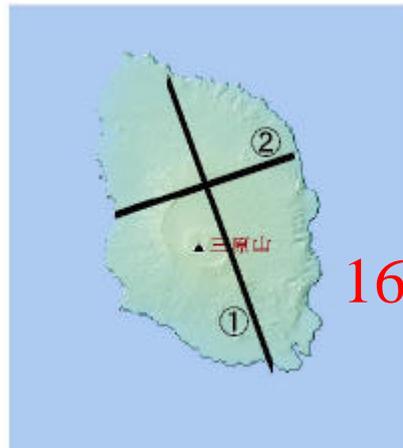

EDM since 1970

Continuous Inflation

Episodicity of Crustal Deformation

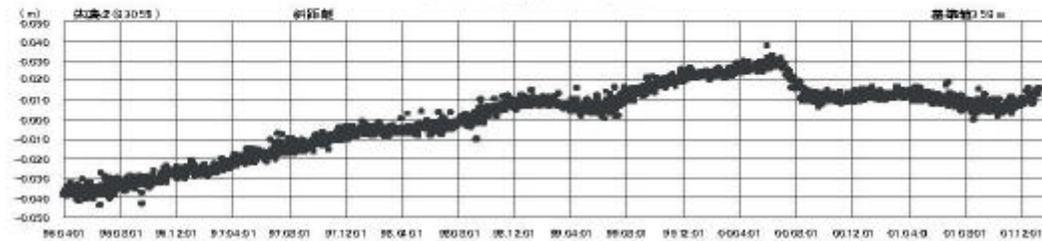

伊豆大島島内基線の時間変化

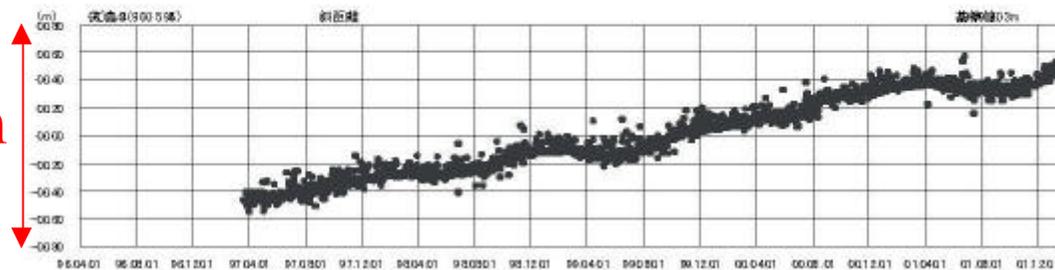

10cm

① 南北基線長時系列

② 東西基線長時系列

16cm

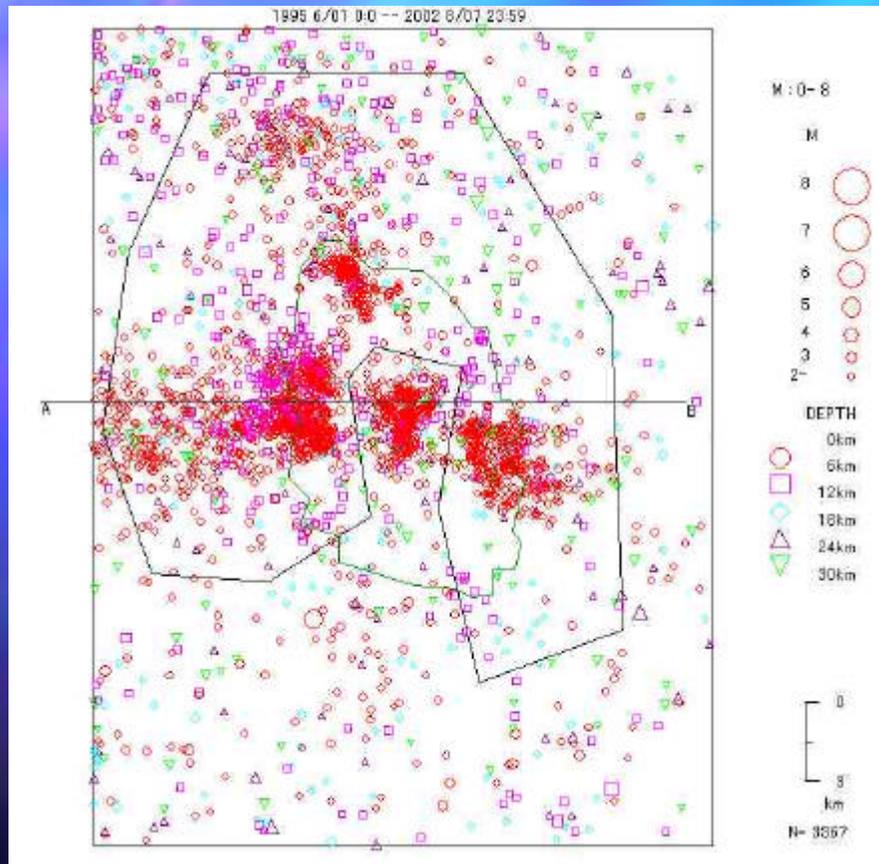

1996/04

2001/12

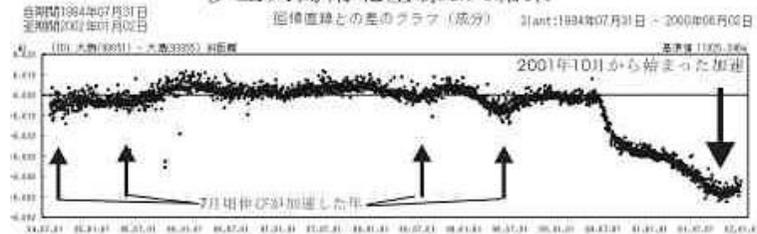

Summary of Crustal Deformation

- Inflation of the Island
 - Inflation of Magma Reservoir
 - Episodicity (Seasonality?) Seismicity
- Subsidence of Caldera Region
 - Tension Field
 - + Dikes (Fissure series A and B) Subduction
- Subsidence of NS
 - Possible Dike formation during 1986 Erptn.
- Subsidence of 1986 C Fissure

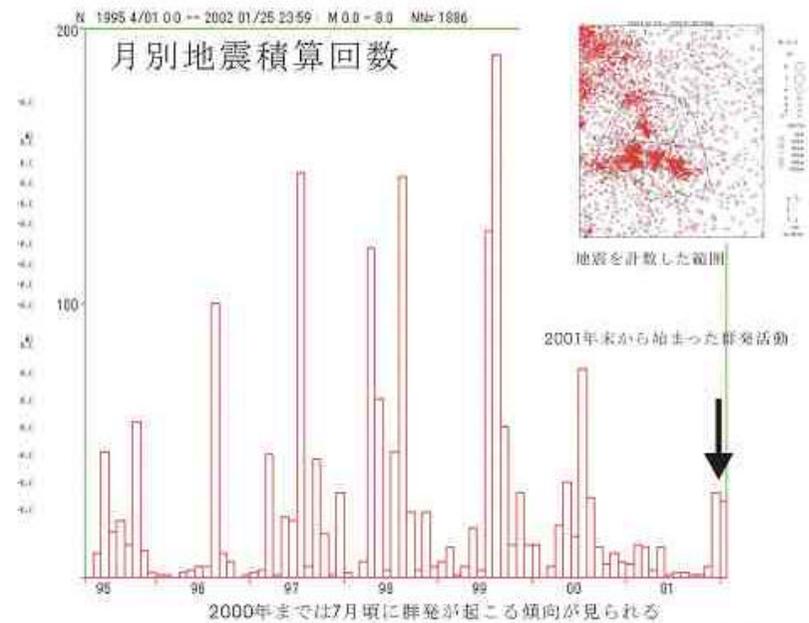

Episodicity of Seismicity and Deformation

伊豆大島における地殻変動と地震活動との関係 伊豆大島南北基線GPS結果

March 2002

Summary

- Izu-Oshima Interesting Test Field
- Seismicity Deformation
- Rich Data: Tectonic Setting, Geology, Volcanology, 3D Structure
